NIKESH KUMAR

AI ENGINEER

Patna, Bihar, India | nikeshkumarwork@gmail.com | +91 7992401103

Portfolio | LinkedIn | GitHub

SUMMARY

AI Engineer who builds and ships LLM-powered applications end-to-end: RAG pipelines, multi-agent systems and deployed APIs, using LangChain, LangGraph and Python. Built **four LangGraph agent projects with live demos** and founded **Innera**, an ed-tech app for CBSE/NCERT and competitive-exam students, now adding AI-driven personalization. Open to full-time / remote roles, available immediately.

TECHNICAL SKILLS

AI & Generative AI: LangChain, LangGraph, RAG, AI Agents / Multi-Agent Systems, Prompt Engineering, Structured Output (Pydantic)

ML / Backend for AI: Python, FastAPI, SQL, Vector Embeddings, Firebase, REST APIs

Tools & Automation: n8n, Docker, Git & GitHub, React / React Native, TypeScript

EXPERIENCE

AI Automation Developer at Business Automation (Freelance) *2026*

- Built and debugged end-to-end n8n workflows: a Google Sheets-triggered Gmail sender, webhook-based Zoom registration auto-emails, and Gmail attachment delivery via Google Drive.
- Containerized and deployed workflows with Docker for persistent, always-on automation.

AI Engineering, Self-Directed Learning at Independent Study *2026*

- Completed a structured LangChain path: LLMs, chat models (OpenAI, Gemini, HuggingFace), embeddings, document similarity, and structured output with Pydantic and TypedDict.
- Advanced to LangGraph: multi-agent systems, ReAct loops and checkpointing, applied across five independent AI agent projects.

PROJECTS

AI Data Analyst Agent | GitHub | Live Demo

Tech: *LangGraph, Pandas, Pydantic, Streamlit*

- Self-correcting agent that turns natural-language questions into pandas code, runs it on uploaded data, and **automatically retries on execution errors**.
- Enforces structured (Pydantic) outputs at each step for reliable, parseable results.

Interview Prep: Multi-Agent Mock Interviewer | GitHub | Live Demo

Tech: *LangGraph, Multi-Agent Systems, Streamlit*

- 3 collaborating agents (interviewer, evaluator, coach) with **question difficulty that adapts round by round** based on answer quality.

Reel Generator | GitHub | Live Demo

Tech: *LangGraph, Streamlit*

- End-to-end pipeline that turns a single topic into a **captioned short-form video**: LangGraph-driven script generation, automated voiceover and video assembly.

AI Job-Match Agent | GitHub | Live Demo

Tech: *LangGraph, Pydantic, Streamlit*

- 4-node agent (extract resume → extract JD → match & score → suggest) that scores resume-to-job-description fit and generates **actionable improvement suggestions**, with Pydantic structured outputs at every step.

Innera: AI-Powered Ed-Tech Platform | GitHub

Tech: *React Native, Expo, Firebase (Firestore)*

- Mobile app for CBSE/NCERT (Classes 6–12) and competitive-exam students (JEE, SSC, Bank, Railway, UGC NET), with AI-driven personalized learning in progress.
- Designed a feature-based modular architecture and a fully **Firestore-driven content system**, so new classes, subjects and exam tracks scale without code changes.

EDUCATION

M.Sc. Mathematics at Durga Soren University *2026*

CERTIFICATIONS

AI/ML Prime 2.0, Apna College (by Shradha Khapra), In Progress

ADDITIONAL INFORMATION

- Languages: English, Hindi
- Comfortable across the full AI product lifecycle: data pipeline → model integration → API → deployment
